STATINTL

Dear

STATINTL

Enclosed are five copies of the proposed [redacted] equipment layout drawings for your use. As we discussed during your Headquarters visit, we want to be sure that sufficient electrical power is available for present and future expansion of the [redacted]. In your discussions with the base facilities engineers please insure that sufficient electrical convenience outlets are installed in the [redacted] room, main [redacted] shop area, and the [redacted] room booths. Electrical power to the main [redacted] equipment racks should be run in the cable trenches and connected directly to circuit breakers. The circuit breaker panel should be large enough to accommodate future expansion of 50 percent. Once the facilities engineers finish their electrical power drawings we would appreciate a copy.
